

# HOW WE LIVE AND WHY WE DIE: THE SECRET LIVES OF CELLS

Acclaimed biologist Lewis Wolpert eloquently narrates the basics of human life through the lens of its smallest component: the cell. Everything about our existence—movement and memory, imagination and reproduction, birth, and ultimately death—is governed by our cells. They are the basis of all life in the universe, from bacteria to the most complex animals. In the tradition of the classic *Lives of a Cell*, but with the benefit of the latest research, Lewis Wolpert demonstrates how human life grows from a single cell into a...

## Peek Inside the Book

Arriving at cell theory has been considered even more important to biology than Darwin's theory of evolution, Lewis Wolpert, *How We Live and Why We Die: the secret lives of cells*

## Reader's Opinions

To be fair to the book, I knew about many of the topics covered in the book. It was rather blandly written, and seems to just be a regurgitation of all the facts Wolpert knew from the top of his brilliant head about various topics in cell biology. The book would have been much improved with some diagrams, and a little bit of romance...

Reads something like a draft -- not quite fully organized, but lots of fascinating information. Wolpert needs an editor with a firmer hand.
